Games are art, and I, Saahil Chhabria would like to introduce myself as a passionate artist specializing in network engineering striving for quality work. I find myself very passionate of playing multiplayer games and being experienced in writing networked systems, however that is not the limit, I love all genres and experiment with playing and making different types of games irrespectively.

Over the course of years of working solo as a developer on multiple game projects, in game jams with friends and having 1 year of experience working under a startup I've grown my set of skills and learnt from my mistakes. I also love learning new things and finding solutions to given problems upholding my standard of good code.

I love being creative and I strive to be better each day. I strongly believe in growth and am ready and open to learn and be criticized for what I don't know. I also strive to bring the best of myself to the table.

Technical Skills

- **Programming:** C++ for Gameplay, Networking, Editor Utilities and Game Mechanics.
- **Game Systems:** Inventory System, Networked Movement Components. Lag Compensation Systems, Procedural Generation (Terrain), Burst buffers, FFT Water.
- **Polishing:** Smoothing gameplay to support game feel, Curve Based Input Buffer Systems, Optimization of Networked Code.
- **Artist:** I possess authentic set of art style and have a passion towards art and its direction.

Education

Bachelors in computer science and Game development – Icat Design and Media College Hyderabad, India.
October 2021- June 2025.

Additional skills

I can contribute to the enhancement of the project by adding required features , polishing or optimizing. In addition to being extremely passionate about game development and multiplayer/networking in specific, I often find myself researching more and more about systems of all kinds to strengthen my knowledge and just to be better, I find myself often talking to other experienced folks or reading written articles to know what the industry standard is.

I have strong problem solving skills that I bring to the table, I like to be useful and chip into whatever / wherever is needed of me. I like to research about any given problem and find a standard solution to it. I also have a lot of experience in many other fields of work through which I've developed being a better communicator and team player. I am confident in my work and in myself, I admit to my flaws and am very open to learning.

Project History/Experience

Job- Programmer /Developer -SMat Verse Studio

Nov2024-Ongoing

- ❖ **Objectives** – To lead development and code the given project fully, making required systems and a code document for structure.
- **Tools Used** – Unreal engine + CPP.
 - **Outcome** – In this project I've learnt how to make user friendly backend systems allowing people with no or very little UE experience to use and make and contribute to the existing systems such as Inventory, 2D Vector Curves, Editor Utilities and appropriate interface functions.
 - **Platform** – PC.

Job- Mentor

Jan2023-Ongoing

- ❖ **Objectives** – To design and teach a course for Unreal Blueprints that offers diploma.
- **Tools Used** – Unreal engine, Zoom.
 - **Outcome** – I teach a course with progression for students going from basic to advanced level including multiplayer and bits of CPP for unreal engine.
 - **Platform** – <https://www.gamer2maker.in/>

Game Name- Kenospic : After Wars

Ongoing

- ❖ **Objectives** – To develop a fully polished multiplayer first person shooter with unique game modes.
- **Tools Used** – Unreal engine, Substance Painter, Cascadeur , Steam and Playfab Database.
 - **Outcome** – Made a demo project with Playfab database integration that allows players to sign in, host and join servers with a server browser and play in a map with a custom payload style game mode.
Implemented Client-side prediction, hit-confirmation, procedural terrain generation and much more and also rewritten old code in CPP for optimization

Devlog - [Devlog](#)

Game Name- Grandpa Wars

Jan 2023

- ❖ **Objectives** –To make a multiplayer game within a month.
- **Tools Used** – Unreal Engine, Marmoset Hexels
 - **Outcome** – Delivered a goofy multiplayer game within a month or a bit more that I could enjoy with my friends
 - **Download URL-** [Game Download](#)

Other Experience

Apart from possessing interest in game development I also take part in management of a textile business (family owned). Furthermore, I also love writing books and have an immense amount of curiosity and attachment with art.

My Work:
